4" - CARBON FIBER CONE - 100 mm

REFERENCE SERIES

Non resonant die cast chassis
Ventilated chassis under spider
Woven carbon fiber cone
High Loss, high compliance rubber suspension
Edgewound, flat copper wire
Kapton voice coil former
Vented pole piece with protection grill
Gold plated terminals

Châssis Zamak moulé non résonant
Fond ventilé
Cône en fibres de carbone tressées
Suspension caoutchouc haute compliance
Fil cuivre plat sur chant
Bobine sur support Kapton
Noyau ventilé - Grille de protection
Connectique plaquée or

Designed for high end compact 2 way and satellite systems, this 4" Bass-Midrange driver offers the advantages of a very stiff and light woven Carbon Fiber cone coupled to a high loss rubber suspension. Bass reproduction is firm, tight and dynamic while the cone motion is well damped and controlled by the high compliance, high loss rubber surround. Special consideration has been taken to ensure the best possible transient response, and an exceptionally natural top end roll-off. unobstructed venting of the Zamak die cast chassis, coupled with a grill protected, vented pole piece and a soft polymer dustcap all contribute to the dramatic transient response. High power handling results from the flat, edgewound copper coil mounted onto a fiberglass reinforced Kapton voice coil former. Gold plated terminals offer excellent solderability. The "suggested applications" charts indicate various driver loads. The response curves shown on the diagram indicate the predicted low end response of the driver in the suggested box volume (Vb) with suggested port (Dp-Lp).

Ce Boomer-Médium de 100 mm, destiné à des systèmes compacts 2 voies et satellites haut de gamme, est doté d'un cône ultra rigide et très léger en fibres de carbone tressées associé à une suspension en caoutchouc amortissant. Les graves sont fermes, définis, dynamiques. Les ondes stationnaires sont absorbées par la suspension en caoutchouc amortissant. Un soin particulier a été apporté au châssis Zamak moulé ainsi qu'à la structure magnétique afin d'assurer la meilleure réponse en transitoire, ainsi qu'une coupure haute naturelle : châssis ouvert et ventilé sous le spider, noyau ventilé et cache noyau en polymère souple ultra léger. Sa bonne tenue en puissance résulte de l'utilisation d'une bobine sur support Kapton renforcé fibre de verre en fil de cuivre plat sur chant. La connectique plaquée or permet une excellente soudabilité. Le tableau "Suggested applications" indique différents types de charge. Les courbes publiées correspondent à la réponse dans le grave pour un volume (Vb) et une dimension d'évent donnée (Dp-Lp).
